

MOBILITY AIR FORCE

What can you do to save energy?

- ④ Fly Smart. Obtain the most fuel efficient routings.
- ④ Get Lean. Unnecessary flight manuals, gear, tools, personal baggage, etc. add extra weight and waste fuel.
- ④ Get MIF. If Mission Index Flying software is available for your aircraft, apply MIF altitudes and airspeeds whenever possible.
- ④ Descend smoothly. Efficient descent profiles save 1% of fuel and engine wear. If every flight was 1% more efficient, the Air Force would save \$80 million.
- ④ Reduce APU use. The burn five times as much fuel per hour as ground sources.
