DRAFT FINDING OF NO SIGNIFICANT IMPACT (FONSI) and DRAFT FINDING OF NO PRACTICABLE ALTERNATIVE (FONPA) Disposition of Defense Fuel Support Point Newington, New Hampshire

A Draft Final Environmental Assessment (EA) was prepared to evaluate potential environmental and socioeconomic impacts of the Proposed Action and alternatives for the disposition of Defense Fuel Support Point (DFSP) Newington, located along the Piscataqua River in Newington, New Hampshire. The Draft Final Finding of No Significant Impact (FONSI) and Draft Final Finding of No Practicable Alternative (FONPA) document is referenced per 40 Code of Federal Regulations (CFR) 1502.21.

DESCRIPTION OF PROPOSED ACTION AND ALTERNATIVES

The United States Air Force (USAF) proposes the disposition of DFSP Newington. The purpose of the Proposed Action is to transfer property in a manner that minimizes or eliminates future USAF responsibility. The transfer of property will also be conducted in a manner that provides for beneficial uses that will be deemed a positive influence to the local community.

Preferred Alternative

The Preferred Alternative includes the removal of facilities in DFSP Newington Facility on property that is owned by USAF Global Strike Command to include the demolition and removal of all bulk fuel storage tanks (in accordance with state and federal guidelines), on-facility (aboveground and underground) pipelines, associated appurtenances, pier structures, buildings, utilities, fencing, etc. and subsequent backfill to grade. Sections of pipeline which cross beneath the Boston-Maine Railway railroad tracks (which traverse the facility) and sections of pipelines beneath roadways associated with Sprague Energy will remain closed in place (in accordance with state and federal guidelines) to avoid unnecessary disturbance to current property owners. Concrete foundations associated with the bulk fuel storage tanks will also be removed or properly closed in place (in accordance with state and federal guidelines). This Alternative also includes removal of aboveground pipeline and valves in an area located on Pease Air National Guard Base (Pease ANGB). This action does not include the removal of the sections of underground fuel pipeline on Pease. This action also does not include removal of the underground fuel pipeline on property that is owned by entities other than USAF Global Strike Command/or the Pease ANGB. The Preferred Alternative would include transfer of the property from USAF ownership.

No Action Alternative

Under the No Action Alternative, USAF would continue ownership of DFSP Newington, and there would be no disposal of the subject fee-owned property. Current caretaker and maintenance operations would continue. Under this alternative, the facility would continue to pose safety concerns as infrastructure continues to corrode and deteriorate over time.

SUMMARY OF FINDINGS

Resource Area	Preferred Alternative A Environmental Consequences	Proposed Mitigation	No Action Alternative Environmental Consequences
Noise	Short-term, direct, moderate, adverse	All construction activities would be conducted during normal business hours (from approximately 7 a.m. to 5 p.m.), and all equipment would be outfitted with mufflers that would be in good working condition. These operational hours are within the allowable time for demolition and construction as stated in the Town of Newington Noise Ordinance (ARTICLE IV: NOISE CONTROL Section 3.401).	None – No change
Air Quality	Short-term, direct, moderate, adverse Long-term, direct and indirect, moderate, beneficial	Best management practices (BMPs) would be conducted during all demolition activities to minimize dust generation. Air monitoring would also be conducted during demolition activities to monitor dust levels and other potential air quality impacts.	None – No change
Land Use and Recreation	Short-term, direct, negligible, beneficial Long-term, direct and indirect, minor, beneficial	N/A	None – No change
Geological Resources	Long-term, direct, moderate, beneficial	N/A	None – No change
Water Resources	Surface Water: Short-term, direct, negligible, moderate, adverse Long-term, direct, negligible, beneficial Groundwater: Long-term, direct and indirect, minor, beneficial Floodplains: Long-term direct and indirect, negligible, beneficial Wetlands: Short-term, direct minor, adverse Long-term, direct and indirect, negligible, beneficial	The implementation of BMPs and a comprehensive Sediment and Erosion Control Plan will minimize any impacts to wetlands in close proximity to the DFSP Newington demolition disturbance area.	None – No change
Coastal Zone Management	Short-term direct, minor, adverse Long-term, direct and indirect, negligible, beneficial	No mitigation measures proposed as the adverse effects are limited to construction activities occurring within the Coastal Zone, and the benefits to the Coastal Zone once the Preferred Alternative is completed clearly offset the temporary adverse effects during construction.	None – No change

Comparison of Environmental Consequences

Comparison of Environmental Consequences				
Resource Area	Preferred Alternative A Environmental Consequences	Proposed Mitigation	No Action Alternative Environmental Consequences	
Biological Resources	Vegetation: Short-term, direct, moderate, adverse Long-term, direct, moderate, beneficial Wildlife: Short-term, direct, minor, adverse Long-term, direct, negligible, beneficial Threatened and Endangered Species: Resource not present, or within close proximity	No mitigation measures proposed as the adverse effects are limited to construction activities, and the benefits to Biological Resources once the Preferred Alternative is completed clearly offset the temporary adverse effects during construction.	None – No change	
Human Health and Safety	Short-term, direct, moderate, adverse Long-term, direct, moderate, beneficial	A Health and Safety Plan would be developed in accordance to regulations under OSHA. A Community Air Monitoring Plan would be developed to assess concentrations of particles and VOCs in the air during excavation of potentially contaminated soils. All personnel working on or visiting the site would be required to wear the appropriate personal protective equipment. Other safety measures will be in place and action will be taken to control dust and or fugitive emissions during demolition.	None – No change	
Utilities and Infrastructure	Short-term, direct, moderate, adverse Long-term, direct and indirect, negligible, beneficial	Loads carrying demolition debris and items for recycling would not exceed posted highway weight limits, and traffic on and off the site would occur during normal business hours.	None – No Change	
Hazardous Materials and Wastes	Short-term and long-term, direct and indirect, major, beneficial	During demolition, soils would be monitored and screened as appropriate. Contaminated soils would be stockpiled, sampled, characterized, and disposed of in accordance with applicable regulations	None – No change	
Socioeconomic Resources and Environmental Justice	Short-term, direct, and indirect, minor, adverse and beneficial	No mitigation measures proposed.	None – No change	
Cultural and Visual Resources	Requires coordination with New Hampshire State Historic Preservation Office	No mitigation measures proposed.	No change; long-term, moderate, adverse	

Comparison of Environmental Consequences

Unavoidable adverse effects would result from implementation of the Proposed Alternative. These effects are anticipated to be minor.

Finding of No Practicable Alternative

Executive Order (EO) 11988 requires federal agencies to avoid to the extent possible the long and short-term adverse impacts associated with the occupancy and modification of flood plains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. After careful review of the attached EA, I have concluded that due to the location of the DFSP Newington Facility within existing floodplain boundaries, the project cannot avoid directly impacting floodplains and, therefore, there are no practicable alternatives to demolition and disposition activities within floodplains. All practicable measures will be taken to minimize harm to or within the floodplain; in fact, the Proposed Action will result in a net beneficial impact to floodplains.

Finding of No Significant Impact

After careful review of the attached EA, I have concluded that the Proposed Action would not have a significant impact either by itself or cumulatively on the quality of the natural or human environment. Therefore, issuance of a FONSI is warranted, and an Environmental Impact Statement is not required. This analysis fulfills the requirements of NEPA and implementing regulations promulgated by the CEQ. Accordingly, the requirements of the National Environmental Policy Act of 1969 and the Council on Environmental Quality, and the Code of Federal Regulations, Title 32, Part 989, Environmental Impact Assessment Process, have been fulfilled, and an Environmental Impact Statement is not necessary and will not be prepared.
